Experience

Software Engineer — *Dublin, Ireland*
Amazon Web Services, CloudFront — *Aug 2022 – Present*

- **Designed and built a fault-isolated control-plane service for zonal state management**, reducing regional blast radius and improving system resilience under failure scenarios.
- **Architected and deployed an HTTP connection warm-pooling system** to proactively establish upstream connections, **reducing connection acquisition time by 50–75%** and significantly improving first-byte latency for latency-sensitive workloads at scale.
- **Implemented a gRPC benchmarking tool** that supports unary, streaming, and bidirectional RPCs, enabling on-demand performance testing and regression analysis.
- **Developed a Rust-based image transformation library** with URI schema definitions, powering scalable, multi-region image processing as a service.
- Identified and resolved persistent HTTP connection reuse defects, **reducing inter-region latency by 60%** and improving cross-region data-plane efficiency.
- **Improved Service Availability** for customers by simplifying HTTP Refresh-hit failover mechanism, eliminating a corner-case cache inconsistency.
- **Improved P99 Availability** by improving the fault retry mechanism, reducing customer-visible impact.
- Created hierarchical observability metrics (regional availability, latency breakdowns) that accelerated root-cause analysis and reduced outage mitigation time.
- Modernized operator tooling, replacing Spring XML with Java-based configuration and upgrading frameworks; recognized as ***Operator of the Quarter***.
- Mentored new engineers on the team, sharing best practices in distributed systems, and guiding them through ownership of production code.
- **Stack:** Rust, C, Nginx, Squid, Java, Python, AWS CDK, Linux networking, Distributed systems, Fault isolation, Availability engineering

Software Engineer, Intern — *Remote, India*
Tekion — *Jan 2022 – July 2022*

- **Developed CRM dashboards** with drag-and-drop functionality, enabling dynamic layout customization.
- **Built adaptable visualization widgets** with real-time graphing for actionable insights.
- **Tech Stack:** ReactJS, Redux, HighCharts

Education

Chandigarh University, Punjab — *Sept 2018 – June 2022*
BTech in Computer Science

- **JEE Merit Scholar**, with 75% tuition fee granted for all semesters.
- **Coursework:** Operating Systems, Databases, Data Structures & Algorithms, Object-Oriented Programming, Engineering Entrepreneurship, AI/ML, IOT (Arduino). **GPA:** 8.0/10.0 (**Major GPA:** 9.0/10.0)

Projects & Achievements

- **Built an Attendance tracking service** using Histogram of Gradients-based Face recognition (93% TPR). **Tools:** OpenCV, Flask, Python — *repo*
- **Top 30** in Xiaomi's ode2code (15K+ participants).
- **Top 50** in the e-Yantra Robotics Competition (Lead a team of 4).
- **Competitive Ratings:** LeetCode 1800+ (Knight), CodeChef 1600+, 5* Gold Badge on HackerRank.
- **Certifications:** Cloud (QwikLabs), Data Science (Credly), Networking (IIT Kharagpur, Silver badge).
